EDUCATION

Veermata Jijabai Technological Institute (VJTI), Mumbai Aug 2024 – Present
B.Tech in Computer Engineering | Minor: Cybersecurity & Cryptography

12th Grade: 93%
10th Grade: 93.6%

TECHNICAL SKILLS

Languages/Concepts: Python, C++, JavaScript, HTML/CSS, SQL/MySQL, Data Structures and Algorithms (DSA)
Cybersecurity: AES-256, DES, RSA, SHA-512, Symmetric & Asymmetric Cryptography
Tools & Platforms: Git, VS Code, Figma, Canva, Picsart, Windows, Linux, macOS
Libraries: Pandas, NumPy

PROJECTS

Map Pathfinding Visualizer | *JavaScript, HTML/CSS* 2026
- Built a web app that visualises shortest-path algorithms (A*, Dijkstra's, Best-First, Beam Search, Bidirectional) on live global maps.
- Integrated browser Geolocation API to centre the map on the user's real-time location dynamically using OpenStreetMaps (OSM).
- Developed and owned the performance metrics overlay module, tracking algorithm speed and node-visit counts.
- Supports interactive source/destination pinning with step-by-step visual traversal animation.

RapidHome – Online Property Marketplace | *JavaScript, SQL/MySQL* 2026
- Developed a full-stack platform for buying, selling, and renting properties with multi-role authentication (Admin, Seller, Buyer, Tenant).
- Built RESTful APIs and designed a relational MySQL schema for listings, users, and transactions.
- Implemented dynamic property search with filters for location, price range, and property type.

CampusConnect – College Event Portal | *JavaScript, SQL* 2025 – 2026
- Created a personalised event discovery portal that filters college events, workshops, and seminars by year, degree, and course.
- Designed role-based access for Admins (event management) and Students (personalised feed and registrations).
- Built a relational database to support dynamic event-user matching based on academic profile attributes.

Smart Home Monitoring System (SHMS) | *Python, HTML/CSS, SQL/MySQL* 2026
- Engineered a full Software Engineering lifecycle project: requirements, design, implementation, and testing.
- Developed independent subsystems for security, energy, lighting, and environmental monitoring.
- Performed black-box and white-box testing with documented test cases, achieving full functional coverage.

Vaccine Management System | *Python* 2025
- Built a vaccination booking system with Admin and Patient dashboards.
- Enabled patients to view available hospital slots by timings and book/cancel appointments; admin panel provided real-time slot and record management.

Event Management System | *SQL/MySQL* 2026
- Designed a normalised relational database schema with ER diagrams for managing events, attendees, and venues.
- Wrote complex SQL queries covering joins, aggregations, triggers, and views for reporting and automation.

ACHIEVEMENTS & ACTIVITIES

- Hacktoberfest Contributor – Completed Hacktoberfest open-source challenge; received official swag recognition.
- Department Coordinator – Technovanza VJTI (Technical Committee, 2024–25) – Coordinated technical events and logistics for VJTI's flagship national-level tech fest.
- LeetCode/DSA – Solved 60+ problems covering arrays, strings, stacks, queues, linked lists, trees, graphs, and applied techniques such as dynamic programming, greedy algorithms, backtracking and divide and conquer.
